

WaterPlan 2050

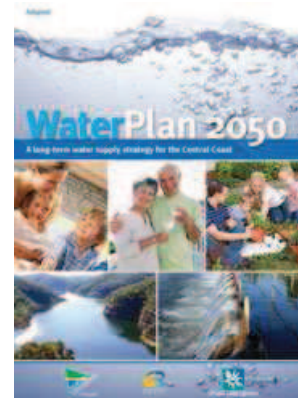

In August 2007, Gosford City and Wyong Shire Councils formally endorsed WaterPlan 2050, a long-term blueprint for managing the Central Coast's water resources over the next four decades.

Work has begun on implementing the key actions outlined in this plan, including construction of the new [Mardi-Mangrove Link](#).

The Mardi-Mangrove Link page on this site is regularly updated as the latest progress reports and other information on this important water infrastructure project become available.

What is IWCM?

Integrated Water Cycle Management (IWCM) is a best practice approach to water utility strategic planning. The IWCM process seeks to take an integrated approach to the management of urban water services and includes consideration of water, sewerage and stormwater to meet community and environmental needs.

Gosford City and Wyong Shire Councils have developed an IWCM strategy for their local government area within a Central Coast context.

As part of the overall IWCM strategy, each Council has developed a separate IWCM sub-plan to fit within WaterPlan 2050.

A document that links Gosford City and Wyong Shire Councils' separate IWCM documents and WaterPlan 2050 was developed to complete the strategy.

The Central Coast's IWCM strategy therefore consists of the following documents:

1. [WaterPlan 2050](#) (PDF - 3.37 MB) to address the regional/inter-regional bulk water supply options
2. [Gosford City Council's IWCM sub-plan](#) (PDF - 1.17 MB) to deal with the local IWCM issues
3. [Wyong Shire Council's IWCM sub-plan](#) (PDF - 2.34 MB) to deal with the local IWCM issues
4. [WaterPlan 2050 IWCM Linking Document](#) (PDF -436 KB) to provide an overarching framework that links each Council's IWCM Sub-Plan and WaterPlan 2050.
