NOTE: Always test on a non-critical area for adverse effects, before commencing graffiti removal. Contact the SoSafe helpline if unsure or specific advise is required.

Remove all type of graffiti including marker, felt pen, spray paint, and more from all surfaces including: trains, traffic signs, timber, tiles, stone, sandstone, plastics, pebblecrete, pavers, painted surfaces, perspex, plasglass, porous surfaces, marble, playground equipment, granite, grout, mortar, glass, concrete, block, buses, adhesive removal and more.

Yellow Graffiti Remover for Painted Surfaces

Yellow graffiti remover for painted surfaces is the gentlest graffiti remover in the SoSafe range. Yellow label has been specifically designed to work slower than SoSafe Blue. Yellow will allow the removal of graffiti from sensitive surfaces layer by layer, without damaging the surface at hand.

When applying to the graffiti, product contact time with the surface is critical. The longer SoSafe Yellow is left on the surface, the deeper the product will penetrate. Ink / Marker graffiti is generally easier to remove with a simple wipe on wipe off approach. Spray paints will require longer contact time. SoSafe Yellow Graffiti Remover is ideal to remove graffiti from perspex, playground equipment, buses, trains and other sensitive surfaces.

Note: Always test the substrate before commencing graffiti removal.

[Product Data Sheet - SoSafe Yellow Graffiti Remover](#)

Graffiti Type: Marker pen, paint, oil, grease, poster glue and crayon.

Water deactivated: Yes

Form: Liquid

Quantities: 750mL x 12 (Trigger Pack) , 10 x 1Lt, 3 x 5 Lt and 25 Lt Drum.

SoSafe Green Graffiti Remover - NEW Broad Spectrum Remover of Graffiti, Poster and Gum.

NEW - SoSafe Green Graffiti Remover is the latest addition to the SoSafe range of graffiti removers. SoSafe Green is highly versatile and the areas of application are broadening every day.

Initially developed by demand of USA bus and rail networks to solve the problem of graffiti on plastics without damaging the surface this product performance has shown amazing results in the removal of graffiti from: shutters, garage doors, colorbond, perspex, wood, plastic signs, playground equipment and other surfaces faster than any other product seen.

Furthermore SoSafe Green Graffiti Remover has proven to be an superior billboard / poster remover; simply spray, wait 15 seconds and peel. The bond of the adhesive breaks down, allowing the stickiness and the poster to be removed effortlessly. Another feature of the Green Graffiti Remover is the removal of gum and glue easy with minimal fuss.

SoSafe Green is formulated to work faster than SoSafe Yellow, making it ideal for use in colder areas where Yellow graffiti remover was typically slow and SoSafe Blue was too strong for the application on hand.

Graffiti Type: All

Water deactivated: No - by dilution

Form: Liquid

Quantities: 12 x 750mL Trigger Packs, 10 x 1Lt Carton, 3 x 5 Lt Carton and 25 Lt Drum.

Blue Graffiti Remover for Concrete Surfaces

SoSafe Blue graffiti remover for concrete surfaces is the most popular graffiti remover in the SoSafe range. SoSafe Blue label can be used on most varieties of porous surfaces and other difficult surfaces. SoSafe Blue will continue to attack the graffiti as long as it has dry contact time, for this reason Blue is also available in sprayable gel.

Blue Sprayable Gel is a more viscous graffiti remover that allows for up to 220% more coverage than traditional liquid graffiti removers. When applied to a vertical wall, will hold in position until the user rinses the wall, reducing the quantity of product required to remove graffiti as well as preventing the graffiti dye running down the walls. SoSafe Blue is suitable for use on concrete, marble, blocks, stucco, stone and other porous surfaces. Will remove paint, oil, grease, poster-glue and crayon.

SoSafe Blue graffiti remover is water neutralised which means that it will stop penetrating after the surface is washed.

SoSafe Blue Liquid graffiti remover is popular with contractors as it is commonly used in conjunction with Shadow Chaser to eliminate all traces of graffiti, see the Shadow Chaser (graffiti ghost remover) instructions for further information.

Graffiti Type: Marker pen, paint, oil, grease, poster glue and crayon.

Water deactivated: Yes

Form: Liquid or Sprayable Gel

Quantities: 750mL x 12 (Trigger Pack) , 10 x 1Lt, 3 x 5 Lt and 25 Lt Drum.

Red Professional Graffiti Remover

SoSafe Red Professional (Red Label) graffiti remover is the latest edition to the SoSafe range of graffiti removers. Professional edition is specifically formulated for use of professionals and contractors with pressure cleaning equipment. Unlike Blue and Yellow graffiti remover, Professional graffiti remover is not deactivated by water. The advantage of this is that it can be used immediately after pressure cleaning to give a deeper clean.

For difficult graffiti stains (i.e. shadows), Professional should be used in conjunction with Shadow Chaser - Ghost remover (see application section). This will eliminate all stains, graffiti, shadows and/or discolouration. It should be noted that the SoSafe Professional will leave the surfaces with a 'wet' appearance for up to a couple of days after treatment; this illustrates how deep the chemical is penetrating the substrate and is not permanent.

NOTE: Some contractors prefer to leave Professional on light shadows overnight to fade out shadows when not used in conjunction with SoSafe Shadow Chaser.

SoSafe Graffiti Remover Professional is suitable for use on concrete, blocks, stucco, stone and other porous surfaces.

Graffiti Type: Marker pen, paint, oil, grease, poster glue and crayon.

Water deactivated: No

Form: Liquid

Quantities: 750mL x 12 (Trigger Pack) , 10 x 1Lt, 3 x 5 Lt and 25 Lt Drum.

Shadow Chaser - Heavy Duty Graffiti Shadow Remover

Shadow Chaser is only available for use by professionals. Shadow Chaser is a corrosive formulation designed to work in conjunction with So Safe Professional Edition (Red Label) to remove the most difficult of graffiti stains including graffiti ghosting, old graffiti and other difficult stains.

How it works
Apply SoSafe Professional (Red Label) to the surface to attack the graffiti, wait 60 seconds then apply Shadow Chaser with a brush or roller (do not splash it around) over the top of the graffiti. The surface will have a small amount of white suds appear as the Shadow Chaser and Professional penetrate the surface; the shadow will disappear in front of your eyes.

Shadow Chaser has been specially formulated for stubborn graffiti stains that cannot be removed by conventional means and requires a strong arm approach.
